

SALES PERFORMANCE ANALYSIS

Business Insight Report

Reporting Period: January 2014 – December 2017 | 792 Orders Analyzed

1. Project Objective

The objective of this project is to analyze retail sales data and create interactive dashboards that help businesses monitor sales performance, identify trends, and support better decision-making.

2. Tools Used

- Microsoft Excel
- SQL
- Microsoft Power BI

3. Project Workflow

3.1. Data Cleaning using Microsoft Excel

The dataset was cleaned before analysis by:

- Removing duplicate records
- Correcting date formats
- Checking missing values
- Standardizing the dataset
- Preparing the data for visualization

3.2. Excel Dashboard

An interactive dashboard was created using Pivot Tables and Pivot Charts.

Features:

- Sales Summary
- Profit Summary
- Region-wise Analysis
- Category-wise Analysis
- Interactive Slicers

3.3. SQL Analysis

SQL queries were used to explore and analyze the dataset.

Analysis included:

- Total Sales
- Total Profit

- Total Orders
- Region-wise Sales
- Category-wise Sales
- Customer Analysis
- Aggregate Functions
- GROUP BY
- ORDER BY

3.4. Power BI Dashboard

An interactive dashboard was created using Power BI.

Dashboard Components:

1) KPI Cards

- Total Sales
- Total Orders
- Total Profit

2) Charts

- Sales by Region (Bar Chart)
- Monthly Sales Trend (Line Chart)
- Category Distribution (Donut Chart)
- Sales by Category (Funnel Chart)
- Profit by Month (Scatter chart)

3) Table

- Top Customers

4) Interactive Filters

- Region
- Category
- Order Date

4. Key Business Insights

Overall Sales Performance

The KPI cards provide a quick overview of the company's Total Sales, Total Orders, and Total Profit.

Regional Analysis

The Sales by Region chart highlights which regions contribute the highest and lowest sales, helping identify strong and weak markets.

Monthly Sales Trend

The line chart shows sales performance over time, making it easier to identify seasonal trends and monthly growth patterns.

Category Analysis

The donut chart illustrates the percentage contribution of each product category to total sales, helping identify high-performing categories.

Customer Analysis

The Top Customers table identifies customers generating the highest sales, which can support customer retention and targeted marketing strategies.

Interactive Dashboard

Slicers enable users to filter data dynamically by Region, Category, and Order Date, allowing detailed exploration of business performance.

5.Conclusion

This project demonstrates a complete data analytics workflow using Excel, SQL, and Power BI. It transforms raw sales data into meaningful insights through data cleaning, SQL-based analysis, and interactive dashboards. The dashboard helps stakeholders monitor key performance indicators, analyze trends, and make informed business decisions.
